

## Specialty's Café and Bakery Serves Up Targeted Communications with the DT Research Signage System

Specialty's Café and Bakery operates 30 stores in California, Washington and Illinois, focusing on service to commercial business districts during the morning and afternoon hours. The focus for Specialty's is the food, from fresh baked breads, cookies and pastries, plus handmade sandwiches, to homemade soups and fresh salads.

### The Challenge

Specialty's wanted a way to quickly change their menus from breakfast to lunch, using the same space. In newer locations, they are offering expanded seating areas, and they needed a way to promote their catering services and social marketing to customers. They also required remote management of the content and timing for the screens, so that their IT teams can control what is displayed and when without having to travel to each location. As part of a new food service law, they will also be required to present nutrition information on all items, a complex task with changing menus.

SA1000 and SA3000

### The Solution

Specialty's chose the DT Research Signage System, comprised of DT Research

Signage Appliances (SA) and WebDT Content Manager software. The DT Research SA1000 is paired with 42" screens in landscape mode for digital menu boards behind service counters showing the current menu offering. The DT Research SA3000 signage appliances are paired with 42" displays mounted in portrait mode in the dining areas to engage customers with multimedia content such as video, flash, and images. The dining area content drives sales for catering, specials, and other products and services, and at the same time ingrains the Specialty's brand by inviting customers to connect on social networking sites.

The digital signs are managed with the WebDT Content Manager (WCM) software, enabling Specialty's to efficiently navigate the layout design and scheduling of their menus and consumer communication. The WCM software provides an intuitive tool to the marketing department, enabling the creation of a dynamic screen layout with up to 8 zones of different content for a single screen. WCM also allows scheduling power timing, so screens can be turned on and off at specific times, and scheduled downloading to use off-peak hours for content playlist updates.

Results

With the DT Research Signage System, Specialty's now has the flexibility to target messages to specific times of day and quickly change menus, prices and promotions. Content can be updated using any internet browser and through the network, and can be managed in a central location and locally. Digital menu boards have maximized the space efficiency, using the same space for the breakfast menus and lunch menus, with a scheduled content change at the specified time of day. The marketing team at Specialty's can now enhance the dining experience for guests while saving the time and costs associated with constantly changing

menus and printing promotions.

"With the DT Research signage system, we have the tools to efficiently communicate fresh messages to customers, enhancing the dining experience and Specialty's brand" commented Specialty's vice president Sean Reiter. "We are already beginning to see the value generated by these screens in the sites where we have rolled out the solution and expect this to continue as we expand and install digital signage in our cafes."

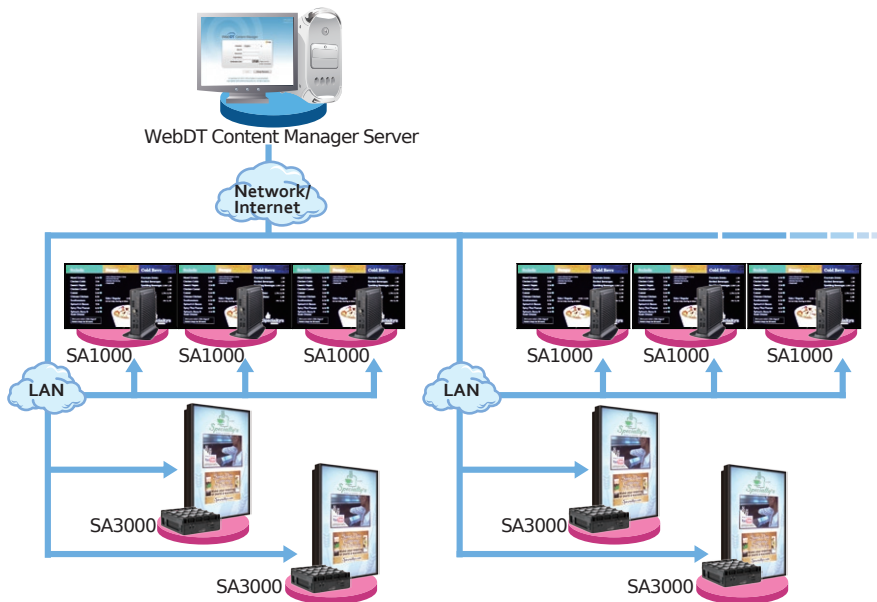

Specialty's is able to green their operations by cutting down on paper that might have been otherwise used

for service promotions and menu information.

Guests in the dining area are now informed and entertained with details on the screens of how to connect via social networking, thereby building brand awareness and loyalty. The DT Research Signage Appliances enable energy savings as well, with low-power consumption and scheduled power usage. The WebDT Signage System is also scalable, so as Specialty's expands their locations and digital signage deployments, they will be able to add Edge servers to balance bandwidth demands.

DT Research™ develops and manufactures web-enabled information appliances for vertical applications. The DT Research family of products is based on embedded computing platforms for secure, reliable, and cost-effective computing. The products include digital signage solutions, wireless tablets, point-of-service handhelds, compact modular systems, and display-integrated information systems. These systems emphasize mobility, wireless connectivity and touch displays. Powered by Windows® operating systems, the devices offer durability and ease in integration, leading to solutions that can be remotely managed with the comprehensive WebDT Content Manager and Device Manager software.
